comprising assaying growth transcriptional activity and protein expression level of hormone-regulatable liver genes, as diagnostic markers of liver pathology Diagnosing abnormal levels of growth hormone activity in liver

N-PSDB; AAC87257.

WPI; 2001-007239/01.

Claim 2; Page 53; 65pp; English.

The invention relates to a method of diagnosing ahnormal levels of growth bormone (GH) activity in the liver, or predicting a change in the condition of the liver in response to abnormal GH activity. The method involves correlating the level of expression of certain specific genes with the level of GH activity in the liver; or with an expected change in the condition of the liver as the result of GH activity. Excessive GH activity in the liver is thought to be deleterious to health, causing an increase in liver size as a consequence of both hyperplasia and hepatocyte hypertrophy, and hepatocellular lesions which progress with age. Studies in transgenic mice which express high levels of bowth age. Studies in transgenic mice which express high levels of bowthe growth bormone identified a number of genes whose expression in the liver is altered by high GH Levels. The genes which progress that the those encoding alpha fetoprotain, continosteroid binding globulin, fetuin, rab8-interacting protein, paraoxonase-3, cytochrome P450IIIA,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5.2 hydroxyacid oxidase, interferon alpha/beta receptor, growth hormone receptor, proteasome z-subunit, and coagulation factor v. Two novel genes, clone 5 (AAC87257) and clone 45 (AAC87258) are also upregulated in response to abnormally high GH levels Conversely, expression of the gene encoding 3-beta-hydroxysteroid dehydrogenas/delta-5-60lta-4 to isomersee appears to be downregulated Title Invention also relates to transgenic punhuman mammals, compissing a GH induced transgene which for
New gene encoding proteins designated MO10, MO19, MO24, useful for diagnosis, prophylaxis and treatment of cancer, obesity, diabetes, osteoporosis, asthma, atherosclerosis and pulmonary disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            nervous system disorder; pain; stroke; hypercholesterolaemia; etherosclerosis; chronic obstructive pulmonary disease; hyperlipidaemia; atherosclerosis; hyperlipoproteinemia; arteriosclerosis; coronary artery disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAB48740
The invention relates to a method of disgnosing abnormal levels of condition of the liver in response to abnormal levels of the condition of the liver in response to abnormal GH activity. The method involves correlating the level of expression of certain specific genes with the level of GH activity in the liver, or with an expected change of the two long of the liver as the result of GH activity. Excessive GH activity in the liver is thought to be delectrous to health, cousing an GH activity hypertrophy, and hepatocellular lesions which progress with expenses in liver size as a consequence of both hyperplasia and CH actease in liver is a consequence of both hyperplasis and CH actease in liver size as a consequence of both hyperplasis and CH actease in the special control of the special control of the special of the special control of the special of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0
```

Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene

The present invention provides a number of nucleotide and protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         liver genes and proteins are useful as diagnostic markers of liver pathology. Assays for the expression of these genes is useful for the diagnosis of liver pathologies associated with gigantism or acromegaly or with diabetes, as other causative agents may act directly or indirectly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              comprising administering the drug to the transgenic animal; and preventing or treating a liver pathology in a patient comprising administering a drug which inhibits the expression of a GH-induced gone. The method of the invention is used for diagnosing abnormal levels of the activity in the liver or predicting a chape in the condition of the liver of predicting a chape in the condition of the liver in response to abnormal levels of GH activity. The GH-regulatable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     upon the same genes. The present sequence represents the protein encoded by the longest open reading frame of the novel mouse liver cDNA clone 45 The protein is thought to be membrane bound ad/or secreted, and has a Myc-type helix-loop-helix dimerisation domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  isomerase appears to be downregulated. The invention also relates to transgenic nonhuman mammals comprising a GH-induced transgene which exhibit or have a propensity to develop a liver pathology; an assay
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Corynebacterium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       organic acid synthesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Coryneform bacterium; amino acid synthesis; vitamin; saccharide;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                mutant of coryneform bacterium, measuring expression amount and analysing the appression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacterials are useful for producing amino acids, nucleic earls, vitamins, saccharides unseriul for producing particularly 1-17sine. The present sequence is a protein described in the exemplification of the insention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to human nucleic acids (AMIS7798-AMI61369) and the encoded polypeptides (AMMI612-AMMI6121) with mootropic, the encoded polypeptides (AMMI612-AMMI6121) with mootropic containing a polyperessant and cycostactic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous system diseases, such as calcalised neuropathies and central nervous system diseases, such as a tabelner's, Perkinson's disease, Huntington's disease, amyotrophic calcalised neuropathies and central nervous system diseases, amyotrophic calcalised solerosis, and Shy-Drager Syndrome, other uses include the cutilisation of the activity, cancer disgone, the system suppression, can also thrombolytic activity, cancer disgonsts and therapy, drug screening, cassays for receptor activity, arthritis and inflammation, leukaemias and calcalisation of the activity, arthritis and inflammation, leukaemias and calcalisations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

MP-4 is a regulator of target cellular redox reactions. MP-4 polynucleotides and polypeptides are useful for treating cardiovascular diseases such as hypertension, atherosclerosis, coronary artery spasm, coronary artery spasm, coronary artery spasm, coronary cardiac hypertrophy and cardiomypophiles, and congestive heart failure. polypeptide is also useful for treating connective tissue disorder such as Ehlars-Danios Syndrome, or a hepatic disorder such as alcoholic liver disorder, liver cirribosis and liver connect.
                                                                                                                                                                                                                                                                                                                                                                antiparkinsonian's; antisclerotic; anxiolytic; antischizophrenic; anti-inflammatory; antiarthritic.

immunosuppressant and cytostatic activity. The polynocleotides are useful in gene therapy. A composition containing a polypeptide or polynocleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathly and localised neuropathles and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amputrophic lateral sclerosis, and Shy-Doader Syndrome, Other uses include the utilisation of the activity, cancer disposals and therapy, constant activity, haemostatic and thrombolycic activity, cancer disposals and inframmation, leakemals and assays or receptor activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel nucleic acids and polypeptides, useful for treating disorders such as central nervous system injuries -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                profesh/membrane profein expression. The hickels acids and complementary sequences may also be used as DMA probes in diagnostic assays (e.g. polymerase chain reactions (PCN)) to detect and quantitate the presence of similar nucleak acids sequences in samples. They may also be used to study the expression and function of secretory proteins/membrane polymeptides and their role in metabolism. The polymeptides may be used as antipents in the production of antibodies against when and and assays to identify mediators (aponists and antisponists) of surges in a therepeutic agents to down regulate expression and board any. The antibodies may also be used as disposed as a contint. The antibodies and antisponists of surges in a samples and antisponists of surges in amples in amples in amples and antipolic agents in amples as of disposes which may be treated include rheumatoid erribititis and dispose of disposes which may be treated include rheumatoid erribititis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  can be used in gene therapy. The polynucleotide sequences and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate secretory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         which encode human secretory or membrane proteins represented by ABM8317 - AAB8419. Included in the invention are primers AAF93917 - AAF94295 and AAF62232 - AAF62235 which are used to isolate the CDWA sequences of the invention. The invention also includes methods the production of antibodies directed against the proteins, and cDWA sequences, which can be used in vaccines. The polynucleotide sequences

                                            B
                                                                    AAG28188
                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes novel human genes (see AAZ00410-Z00477) and the secreted proteins (see AAZ5711-Y25778) and fragments (see
AAY25719-Y25907) they encode. The polynucleotides and their corresponding
secreted polypeptides are useful for preventing, treating or ameliorating
medical conditions es, by protein or gene therapy. Also pathological
conditions can be diagnosed by determining the amount of the new
CC polypeptides in a sample or by determining the amount of the new
CC polynucleotides to the invention, based on which tissues they are most
CC the new polynucleotides. Specific uses are described for each of the 67
CC polynucleotides of the invention, based on which tissues they are most
CC highly expressed in, and include developing products for the diagnosis
CC overlapmental abnormalities and fetal officiencies, blood disorders,
CC developmental abnormalities and fetal officiencies, blood disorders,
CC question diseases of the immune system, autoimmune diseases, hepatic
CC and renal disease, inflammation, allergies, ischaemic shock, Alzheiner's
CC and cognitive disorders, senticophrenia, restenois, cardiovascular
CC disorders, wound healing, stroke, arthritis, obesity, asthma, seepsis,
CC cardiovascular transplant rejection, metabolic disorders, infections
CC and ADS. The polypeptides are also useful for identifying their binding
                                                                                            RESULT
                                                                                                                                                                                                                                       Query Match

Its CDMA was isolated from an adult lung CDMA library. The proteins and coding sequences of the invention can be used in the isolation of sinilar genes and proteins. In the shuckation of their function in vivo, and the same proteins of the shuckation of their function in vivo, and creat a number of conditions. It is possible that they may have used as nutritional supplements, as cytokine or ceil proliferation factors, in limiture modulation, where, they may be used to treat immune and factors, in limiture modulation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAX56698 to AAX56776 encode AAX59877 to AAX79525 which represent human transmembrane protein designated HTMPN-1 to HTMPN-79, respectively. The transmembrane protein have immunospecific antiproliferative and neuroprotective activities. The human transmembrane proteins, polynucleotides encoding them and other compositions and methods from the present invention, can be used for the diagnosis treatment or prevention of immune, reproductive, smooth muscle, neurological.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Proteins, polynucleotides, vectors, host cells and antibodies used to diagnose, treat or prevent immune, reproductive, smooth muscle, neurological, gastrointestinal, developmental and cell proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Location/Qualifiers

                                                                                                                                                                                                                                                                                                                                                                                                                                        the patients own production of GENSET polypepides, Conversely, antisense nucleic acid molecules may be administered to down requisite the GENSET expression by binding with the calls, own genes and preventing their expression. The sense and antisense nucleic acids may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples, and hence to determine which patients may be in need of restorative therapy. The GENSET polypeptides may be used as antigens in the production of antibodies and in assays to identify modulators (agonists and constant of GENSET polypeptide expression and activity. The present sequence is a GENSET polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to full length GENSET human nucleic acids encoding potentially secreted proteins. The nucleic acids and the polypeptides they encode may be used in the prevention treatment and diagnosis of diseases associated with inappropriate GENSET gene expression. For example, they be used to treat disorders associated with decreased GENSET gene expression by rectifying mutations or detections in a GENSET gene expression by rectifying mutations or detections in a patient; s genome that, affect the activity of GENSET or by supplementing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 21; Page 817-818; 921pp; English

                                                                                                                                                                       antisense nucleic acid molecules may be administered to down regulate GRNSET expression by binding with the ceils' own genes and preventing their expression. The sense and antisense nucleic acids may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples, and hence the determine which patients may be in need of restorative therapy. The GRNSET polypeptides may be used as antigens in the production of antibodies and in assays to identify modulators (agonists and antagonists) of GRNSET polypeptide expression and activity. The present sequence is a GRNSET polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                        CRMSET gene expression by rectifying mutations or deletions in a patient's genome that affect the activity of GENSET or by supplementing the patients own production of GENSET polypeptides. Conversely.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to full length GENSET human nucleic acids encoding potentially secreted proteins. The nucleic acids and the polypeptides they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate GENSET gene expression. For
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Full length GENSET human nucleic acids encoding potentially secreted proteins, useful in gene therapy and vaccination against a variety of diseases, and for diagnosis of those diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 21; Page 829-831; 921pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Dumas Milne Edwards J,

                                                                                                                                                          consider for preventing treating or amailtowating modeles conditions e.g. by protein or gene therapy Pathological conditions can be also disagnosed by protein or gene therapy Pathological conditions can be also disagnosed by protein or gene amount of the new polypeptides. The anaple or by the sequences, or its fragments, are useful for chromosome identification and mappling; as antisense and triplex forming therapeutics; in gene therapy; for (foreasic) identify related sequences or specific marks; in concern therapy; for (foreasic) identify related sequences or specific marks; and concern therapy and contribute and to raise anti-DNA antibodies. Antibodies are useful as imminoassay reagents (including for in vivo imaging) and consecution of oligoners and to raise anti-DNA antibodies. A very therapeutically to inhibit or activate particular polypeptides. A very confidence of infections are consecutive or had a consecutive of the polynocleotide and contributed as quences, e.g. antichmune or haematological diseases, and consecutive or infections. The sequences may also be useful in wound healing to mobulate differentiation of embryonic siem cells, to modulate weight, papetite, behaviour etc. and as food additive or preservative. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to nucleic acid sequences (AX22211 to AX22282) encoding human secreted proteins (AX20133 to AX20143). The secreted protein gene sequences are deposited with the ATCC under deposit number ATCC 20138, 209139 or 209141. Host cells containing vectors comprising the nucleic acid sequences are used for the recombinant expression of the secreted proteins. The polynucleotide and anno acid sequences are

S. agalactiae is an encepsulated bacterium which is a major pathogo. of human cousing sepsis and meaning this is in secondaries when a adults. The S. agalactic antisent optypeptides are used to vacainate against Group B Streptococcus antisent for pathogolic composition is infections, particularly to prevent effection there been obtained arising from the maternal gential interies humannogenic composition is useful in the preparation of a medicament for the treatment prior art prohiphasis of group B Streptococcus infection. The invention does not have the disadvantages or varies response also associated with prior art capsid polysaccharide vaccination against Group B Streptococcus.

They may also be used to screen for agonists or antagonists, which may themselves have use as antibacterial agents. The polynucleotides of the invention may also be used in gene therapy protocols.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAX53015 to AAX54556, AAX54577 to AAX54615, and AAY14253 to AAY75941 represent novel Neisseria meningitis and n. gooverheae polynucleotides and polypeptides. AA554537 to AAX54576 and AAS54656 to AAX54573 represent PCR primers used in the exemplification of the present invention. The polypeptides, the polynucleotides, antibodies and compositions of the invention can be used as vaccines, as diagnostic reagants, and as immunogenic compositions. The polypeptides can be used in the treatment of the composition of the polypeptides can be used in the termination of preventing infection due to well-sential backeria; (a.g., meningitis and septicepsia), to detect the relationship of the polypeptides can be used in the composition of the polypeptides can be used in t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Fraser C, Galeotti C, Grandi G,

                                                                                                                                                                                                                                                                                                                                                                                                                       AAX53015 to AAX54536. AAX54577 to AAX54015, and AAY14253 to AAY7504] represent novel Neisseria meningitis and N. gonorrheae polynucleotides and polypeptides. AAX5437 to AAX54576 and AAX54616 to AAX54737 represent FCR primers used in the exemplification of the present invention. The polypeptides, the polynucleotides, antibodies and compositions of the invention can be used as vaccines, as diagnostic reagents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicament), to detect the presence of Neisseria bacteria, or to raise antibodies. They may also be used to screen for aponists or antagonists, which may themselves have use as antiboterial agents. The polynucleotides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Praser C,

The genes and proceins have activities dependent on the tissues and cells in which they are expressed. Examples of their activities and the activities of their activities and the activities antiarthritic; antiarthritic; antiferenties of continuous opposes were antiarthritic; antiproliferative cytostatic cardiant vasoropic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                proteins AAB64773 - AAB64820.                                                                                                                                                                                                                                                                                 ARF67743 to ARF6080 encode the Corynebacterium glutamicum membrane construction and membrane transport (MCT) proteins given in ARP7630 ARP76847. The MCT nucleic acids and proteins are useful in the identification of microorganisms which can be used to produce fine identificatio, for modulating fine chemical production in C. glutamicum commicals, for modulating fine chemical production in C. glutamicum commicals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              09-JUL-1999;
                                                                                                                                                                                                                                                                                                                                                                                       Corynehancterium glutamicum nucleic acids encoding membrane construction and membrane transport proteins or their portions, useful for typing or identifying C. glutamicum or related bacteria, and as markers for transformation .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               14-JUL-1999;

These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and annlysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, or anticolability of the producing anticolability in the producing anticolab
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nakagawa S,
